

INDUSTRY & Summer Fun

Inflatables & Pool Liners

How fun would our pool time be without inflatables or pool liners? Produced by **Shintech Louisiana**, **Westlake Chemical**, **Formosa**, and **OxyChem**, the chemical PVC (Polyvinyl Chloride) allows us to manufacture fun!

Fertilizer

The smell of fresh cut summer grass can't be produced without fertilizer containing ammonium nitrate. This chemical is made by companies **CF Industries** and **Nutrien**.

Chlorine

We all know that chlorine is essential to our swimming pools, but did you know that it's used to disinfect, sanitize, and protect water? Chlorine is produced by **Olin** and **OxyChem**.

Potato Chips

Keeping potato chips fresh is made possible by nitrogen in the bags, which is produced by **Air Liquide** and **Air Products**.

Towel Dye

The vibrant colors of fun pool towels are created by the dye containing chemicals like carbon black and aniline. These chemicals are produced by **BASF**.

Sunscreen

Sunscreen protects us from the sun's harmful rays that can lead to sunburns! The chemical ethylene oxide is a key ingredient in sunscreen and is produced by **Shell Chemical** and **LyondellBasell**.

Soda Cans

Cracking open a fresh can of soda is so satisfying on a hot summer day, and they can't be made without amines made by **Eastman**, or **OxyChem** and **Oxbow's** work in the aluminum process.

Lawn Furniture

Summer lounging is made possible by polyurethane foams, a chemical produced by **BASF**.
